

LINKED LISTS (CONTD)

DYNAMIC ARRAYS

Problem Solving with Computers-I

<https://ucsb-cs16-wi17.github.io/>

C++

```
#include <iostream>
using namespace std;

int main(){
    cout<<"Hola Facebook\n";
    return 0;
}
```

Review:

What are the 'links' in a linked-list?

Iterating through the list

```
int lengthOfList(LinkedList * list) {  
}
```

Dynamic memory pitfall: Memory Leaks

- Memory leaks (tardy free)
 - Heap memory not deallocated before the end of program (more strict definition, potential problem)
 - Heap memory that can no longer be accessed (definitely a leak , must be avoided!)

Does calling foo() result in a memory leak?

```
void foo(){  
    int * p = new int;  
  
}
```

- How to avoid memory leaks?
- How to detect memory leaks?

Deleting the list

```
int freeLinkedList(LinkedList * list){...}
```

Which data objects are deleted by the statement: delete list;

(C) All nodes of the linked list

(D) B and C

(E) All of the above

Does this result in a memory leak?

Deleting the list

```
int freeLinkedList(LinkedList * list);
```

Dynamic arrays

```
int arr[5];
```

```
struct UndergradStudents{  
    string firstName;  
    string lastName;  
    string major;  
    double gpa[4];  
};
```

Arrays and pointers

arr	20	30	40	50	60
100	104	108	112	116	

```
int arr[] = {20, 30, 40, 50, 60}
```

- `arr` is a pointer to the first element, what is the output of `cout<<arr;`
- `arr[0]` is the same as `*arr`
- `arr[2]` is the same as `*(arr+2)`
- Use pointers to pass arrays in functions (See code from [lecture 9](#))
- Use *pointer arithmetic* to access arrays more conveniently

Review of homework 10, problem 5

```
void printRecords(UndergradStudents records [], int numRecords);  
int main(){  
    UndergradStudents ug[3];  
    ug[0] = {"Joe", "Shmoe", "EE", {3.8, 3.3, 3.4, 3.9} };  
    ug[1] = {"Macy", "Chen", "CS", {3.9, 3.9, 4.0, 4.0} };  
    ug[2] = {"Peter", "Patrick", "ME", {3.8, 3.0, 2.4, 1.9} };  
    printRecords(ug, 3);  
}
```

Expected output

These are the student records:

ID# 1, Shmoe, Joe, Major: EE, Average GPA: 3.60

ID# 2, Chen, Macy, Major: CS, Average GPA: 3.95

ID# 3, Pan, Patrick, Major: ME, Average GPA: 2.77

Review of homework 10, problem 5

```
void printRecords(UndergradStudents records [], int numRecords)
{
    double avgGPA;
    for(int i=0; i< numRecords; i++){

        cout<< "ID#" <<i <<" , " <<records[i].lastName <<" , "
             << records[i].firstName << " Avg GPA:" << avgGPA <<endl;
    }
}
```

Review of hw10, P5

```
void printRecords(UndergradStudents *records, int numRecords)
{
    double avgGPA;
    for(int i=0; i< numRecords; i++){
        avgGPA=0;
        for(int j=0; j< NUMGPA; j++){

        }
        cout<< "ID#" <<i <<" , " <<records[i].lastName <<" , "
            << records[i].firstName << " Avg GPA:" << avgGPA <<endl;
        }
    }
}
```
